Anycounty DA's Office: Case Trend and Performance Analysis (2019–2025)

Skylar Pae

December 2, 2025

I. Executive Summary

This report provides a behavioral analysis of crime trends and operational impacts within the Anycounty District Attorney's Office. The analysis will focus on trends from 2019 to the end of 2024, the five years prior to the policy change, and present trends in theft, drug, and gun-related offenses following this change.

II. Theft, Drug, and Gun-Related Report Trends

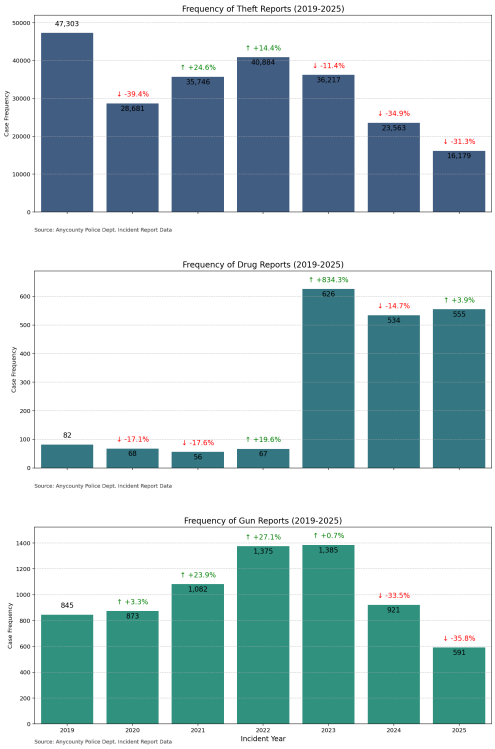

Figure 1: Frequencies of Theft, Drug, and Gun-Related Reports per Year

While theft and gun reports show oscillations from 2019 to 2023 (1) there's a steady decrease in reports beginning in 2024. Focusing on post-policy trends, theft decreased by 31.3% from 2024, and gun-related reports decreased by 35.8%.

III. Performance Efficiency: Average Time to Disposition

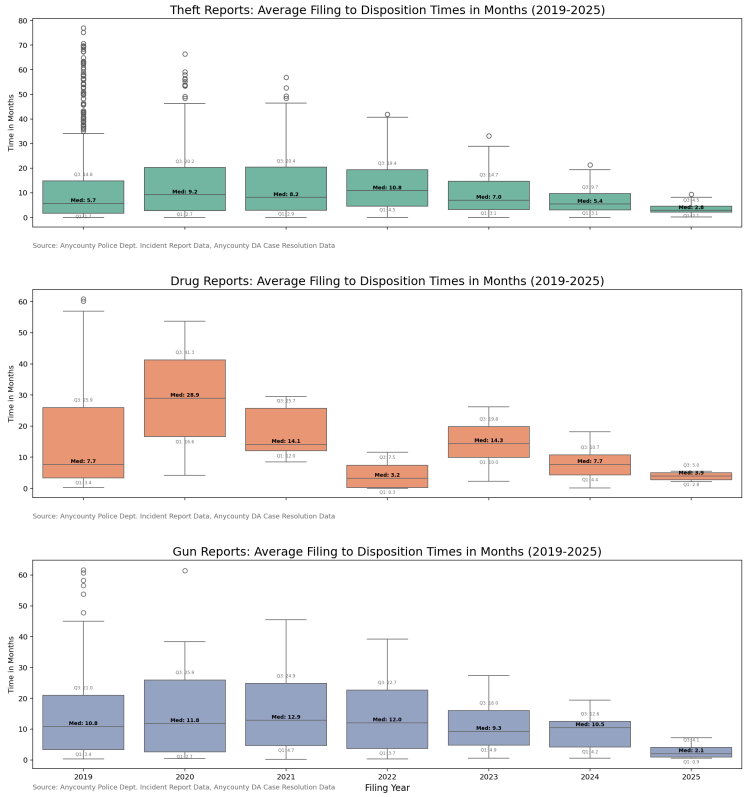

Figure 2: Average Filing-to-Disposition Timeline for Theft, Drug, and Gun-Related Incidents

Analysis of the median time to disposition from the filing date, shown below in Fig. 2, provides a measurable visualization of the performance of Anycounty's DA's office. Across all three categories, the median time from the report filing date to disposition ranges from 3 to 10 months. All three categories also show peak median times from 2020 to 2021, likely reflecting the bottleneck of case processing caused by the global pandemic. Median times for theft and drug reports begin to decrease by 22.9% and 46.2% in 2023, resulting in a significant decrease for both categories post-2024. The median time to disposition for gun-related reports remains stable over time, but significantly decreases by 80% post-2024. These significant decreases post-2024 reflect the policy change's impact on performance levels within the DA's Office.

IV. Case Outcome Analysis

Table 1: Pre-Policy Percentage Distribution of Case Outcomes (2019–2024)

Major Category	Conviction	Dismissal	Successful Diversion	Pending	Fugitive Status	Acquittal
Theft Reports	35.9%	14.3%	17.7%	1.5%	1.0%	0.0%
Drug Reports	27.0%	8.0%	20.4%	9.5%	12.4%	0.7%
Gun Reports	53.3%	18.4%	4.2%	5.3%	0.3%	0.2%

Table 2: Post-Policy Percentage Distribution of Case Outcomes (2025)

Major Category	**Conviction**	**Dismissal**	**Successful Diversion**	**Pending**	**Fugitive Status**	**Acquittal**
Theft Reports	20.6%	9.8%	39.2%	5.4%	1.0%	0.0%
Drug Reports	0.0%	0.0%	12.5%	37.5%	0.0%	0.0%
Gun Reports	50.0%	22.2%	0.0%	16.7%	0.0%	0.0%

The distribution of case status for each incident category is displayed in two proportional tables (Tables 1 & 2) to signify the final impact of the policy change on the accused. Prior to the policy change in December 2024, the most frequent outcome across all three offense categories was conviction 1. After the policy change, the outcome frequency shifts significantly for each offense type:

Drug reports shift away from convictions, resulting in a 27% decrease and a 37.6% increase in fugitive statuses. Considering the significant change in Fugitive and Pending status (+28% from Pre-Policy), the policy impact appears to have raised the threshold for formal prosecution of drug offenses. This categorical shift could also suggest that the use of diversion programs is more prominent or is more accessible for the accused party with drug-related convictions.

Gun-related offenses result in 49.8% more acquittals and 18% more successful diversions post-policy 2, resulting in a 31.1% decrease in convictions by 31.1%. This similar pattern to drug-related offense outcomes indicates the policy change raised the standard for filing, and/or allowed for more non-carceral alternatives to be made available to the accused.

Theft-related offenses are down 26.1% in convictions and now result in 18.6% more guilty pleas than pre-policy (1), but also see increases in acquittals (+20.6%) and "record sealed" (+20.3%) statuses. While theft report outcomes are also down in convictions post-policy (2) by 26.1%, the rise in guilty pleas, as well as acquittals and "record sealed" statuses, suggests the new policy could be pushing cases to faster resolutions, such as efficient plea bargaining, deferred judgment programs, or trial failures due to insufficient evidence or an accused person's failure to appear.

V. Conclusion

The resolution outcomes for theft, drug, and gun-related crime reports in Anycounty shifted from mostly convictions from 2019 to 2024, to non-incarceratory dispositions after the policy change (2). This transition suggests that the policy change was intended to increase the accused's access to diversion programs. Considering the decrease in theft and gun reports in 2025 (1), as well as the reduction in time from filing to disposition across all three offense types (2), this new policy is already proving to be an improvement for the community. It provides more accused parties with non-carceral options through diversion programs, pushing for betterment and wellness in defendants who might struggle with addiction or mental health. This will ideally lower the recidivism rate for these categories as well, positively transforming the community in the long term.
